	70	PAWP70	WedgeChek Punch		PASWK202	Small Parts Kit
			(includes 70, 71, 73)			(1) Dose Adjustment Ring–#25
	71	PAWP71	WedgeChek Punch Tip			(1) Piston Connector Rod-#26
	72*		WedgeChek™			(1) Screw Lever Pivot-#09
4		*Not sold separately.				(1) Lever Nut-#28

High-Volume Kit (Sold separately)

Make up to 1000 injections without reloading chemical. Simply attach the hose to the Wedgle Direct-Inject unit and the 1000 ml chemical pack, prime, and inject. No other tools, equipment, or power supply are needed.

- Remove the yellow cap from the hose guide by unscrewing. Remove the adaptor sleeve from inside the hose guide.
- Slide the High-Volume hose through the yellow cap and into the hose guide, pulling the hose through the chemical pack cage and out the top of the backpack.

Attach the hose to a 1000 ml chemical pack using the same method as you attach a 120 ml chemical pack to the injection unit (see instruction on page 1).

- Carefully pull the hose and chemical pack into the cage inside the backpack until the chemical pack rest snugly against the hose guide.
- 5. Secure the chemical pack in the cage with the closure pin.
- 6. Place the adaptor sleeve over the hose and slide the sleeve into the hose guide.
- 7. Screw the yellow cap onto the hose guide and hand tighten.
- 8. Attach the hose to the top QC coupler on the injection unit.
- 9. Prime and you are ready to begin injecting.
