

PrimeTime[™]

A Broad Spectrum Post-Emergent Broadleaf Herbicide

Dicamba-free post-emergent broadleaf herbicide specifically developed to carry a high load of active ingredient in every gallon and deliver maximum efficacy at low use rates.

Broadleaf weeds don't stand a chance against the unique blend of three active ingredients in PrimeraOne PrimeTime herbicide. The ultimate three way combination, PrimeTime delivers effective season long broadleaf weed control with the added benefit of reduced risk to ornamentals and dicamba sensitive plants.

- As good as any other phenoxy herbicide with added advantages
- Broad spectrum control including 'difficult to control' summer and winter annuals
- Highest active ingredient load three-way herbicide available
- Non-dicamba amine formulation offering increased safety for shallow rooted woody plants and ornamentals and low volatility
- Requires lower application rates/acre than similar competitor products

Post-emergent control of a wide spectrum of broadleaf weeds including:

White Clover
Ground Ivy
Mouse Ear Chickweed
Oxalis
Spurge
Knotweed

Active Ingredients

2,4-D MCPP 2,4-DP

Packaging

2 x 2.5 gallon case

30 gallon drum

Application Rates

See label for specific uses and rates.

Mode of Action

Auxin growth regulator
